

EPP SUSTAINABLE PROTECTION AND INSULATION

Synprodo
by BEWI

OUR SUSTAINABILITY PROMISES

Our ambition is to be a circular company built on renewable energy by 2030. Although our EPP is of high quality and long-lasting, a day will come when it becomes waste. Partly by working closely with our customers, we do everything we can to complete the circle when EPP products reach the end of their service life. We collect the waste so we can reuse it as raw material for new EPP. It is a closed-loop process that saves natural resources, minimizes waste, reduces carbon emissions and cuts water use.

EXPANDED POLYPROPYLENE

EPP is a closed-cell thermoplastic foam with a density that can be tailored to each application or purpose. EPP has superior energy absorption, high resilience and excellent thermal insulation properties. It absorbs hardly any water, is resistant to chemicals and oils and is easy to clean.

A SUSTAINABLE CHOICE

Once collected, the EPP waste is processed in such a way that it can go back into the manufacturing chain.

The recyclable packaging and insulation material is favoured among the automotive, HVAC and other industries thanks to its energy absorbance, impact resistance, light weight, and its effectiveness in providing both acoustic and thermal insulation. We also produce EPP transport packaging for cameras, instruments, electronics and other applications.

INNOVATION THROUGH COLLABORATION, THAT IS WHAT SYNPRODO STANDS FOR.

THE SKY IS THE LIMIT

We produce our own raw materials; we work with our customers and suppliers to design suitable applications. Synprodo eagerly accepts any challenge - together we can do more. We want to inspire our clients to think of new ideas and solutions. We like to invest in research & development. With over 65 years of experience, we continue to surprise our clients with innovative solutions.

In addition to our professional R&D departments, our state-of-the-art design facilities and ultra-modern machinery ensures that we can translate almost any wish into a perfectly matched product. We apply the most exacting quality standards to this process, as you may expect from a supplier of our calibre.

INTERNATIONAL CONNECTIONS

Synprodo has formed part of the BEWI Group since 2018, one of the leading suppliers in the field of packaging, components and insulation solutions. The head office of the holding is located in Solna, Sweden, but the BEWI Group is active in almost 80 locations within Europe and has over 3.900 employees. Approximately 125 of these employees work at Synprodo in Wijchen and approximately 50 at Synprodo Besto in Zwartsluis.

OUR DEDICATION TO A CIRCULAR ECONOMY

The group-wide commitment to sustainability is integrated throughout the chain: from the production of raw materials and end products to the recycling of used products. Guided by the BEWI vision to protect people and property for a better everyday life, we take responsibility and adapt our business to the expectations of tomorrow. This is how we lead the change towards a circular economy.

OUR SUSTAINABILITY PROMISES

We recognize the urgency of corporate sustainability for improving the social, economic and environmental well-being of the community. We are already well on our way to giving substance to this, but we would like to increase the pace further. Together with our holding company, the BEWI Group, we have elaborated our sustainability ambitions in a strategic plan with clearly defined objectives for 2030.
